

LOSSLESS

INC.

General User manual

Lossless

Foreword

Thank you for picking Lossless !

This game was made as our project for our first year at EPITA, and was made by Eden LUMBROSO, Amélie NANNETTE, Pierre DUBRULLE, Lucas BOIDIN and Tarek ZAMPALEGRE.

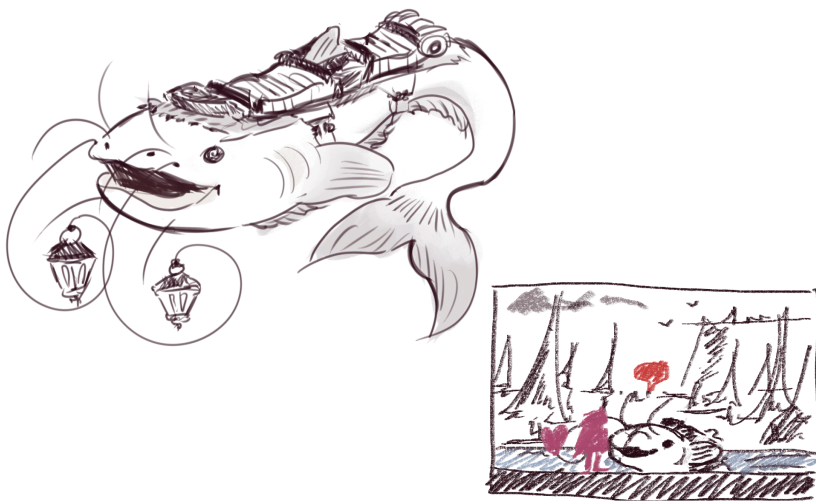

Table of content

I) Installation

II) IP address

III) Keys

IV) Pause Menu

V) Rooms/world

VI) Coins

VII) NPC (fish, sellers)

VIII) Uninstalling the game

I) Installation

You have two different ways of installing the game on your laptop. Either you use the download process on the website, that you can get on two different pages : Download and Home. From there, you only click on the button, it will load you a zip file. On Windows, you first need to extract the ZIP file before playing the game. To do this, right-click on the **.zip** file and select “Extract All...”. Choose a destination folder, then click “Extract”. A new folder containing all the game files will appear. Open this folder and look for the game’s main **.exe** file. Double-click it to install or launch the game.

On macOS, you can extract a ZIP file by simply double-clicking on it. The system will automatically create a new folder containing all the game files. Open this folder and look for the game application or an installation file, usually ending with **.app** or **.dmg**. Double-click it to install or launch the game.

The other way would be to get the USB key that we created for the defenses. It would contain the game in itself an executable. You can directly play the game with that.

II) IP address and Connection

In order to play the game, you have to be 2 players. The two players will need to be on the same network, with the same Wifi and be close to each other in real life.

When you load the game, you will have two options : either you *Join* the game, either you *Play* the game. In the *Join* option, you have to write the IP address of the other player, and *Confirm* to access the game. When joining, your character will be the Heart. In *Play*, you will have to wait and communicate your IP address to the other player, and will load the game. When playing, your character will be Belladonna. After loading, you will have access to different backups of your game. To initialize a new game, you click on the little trash on the left of the backups, and you will have a *New Save*. The game will restart from the beginning. If you don’t want to initialize a new game, you just click on your backup, and you will be in the *Merchant’s Creek*, and the following world will be the one you stopped in.

III) Keys

In the game, the only way possible to play the game will be to control the characters with the following keys:

- D to move forward
- Q to move backward
- SPACE to jump
- A to attack
- E to use a card
- D or Q + Shift to dash (aka move faster)
- the TOUCHPAD or Left click to talk to the fish or the other characters

IV) Pause menu

In the *Pause menu*, you have different options. The *Deck* will show you your cards. The ones on the bottom represent the one you have collected. On the top, you can select a maximum of 3 cards from the ones you have collected, before entering a new world. When entering a world, the game will select randomly one of the 3 cards. This card will be the one that you will be using throughout the entire world/level. You can use the card using E, but you will only use it, not lose it. To reuse the card afterwards, you will have to wait some time, but the card will still be in your deck.

Example of usage of cards:

I am in the Merchants creek before the world of anger. Let us say I have in total 5 cards, the ones that I accumulated when playing. I pick 3 cards that I think will be of use during Anger. When entering the world, the game will choose one of these 3 cards. This card will appear in the Inventory. This card will be the only one I will use during the Anger world. When finishing this world, I will have to defeat the final boss to have one more card. And the process repeats. It is possible to sacrifice your cards, to give them to the other player. If one player has a card that they wish to give to the other player, you can do it in the Merchant's Creek with the Oyster lady.

In the *Inventory*, you have two rectangles, representing the Card chosen by the game, and the weapon you picked. You also have your stats on the bottom. Your amount of money will appear, you could use it to trade with the wandering merchant. The Attack and Speed will depend on the cards you chose.

The *Menu* button gets you back to the main menu, with the Join, Play, Options and Exit possibilities. You could access the world you were in Play, and select your oldest backup. You will arrive in the Merchant's Creek before the world, as usual.

In the *Options*, you can select if you want the music of the game or not.

The last button is the *Exit* one, so you close the game.

V) Worlds and Rooms

In total, the game has 5 worlds : Denial, Anger, Sadness, Bargaining and Acceptation. Each of these worlds have 6 rooms, excluding the final boss combat room. Each of these rooms have enemies, their number can vary, between 2 and 4. The final boss room has 1 enemy, the biggest one, and the hardest one in the world. Between these worlds, there is a transition room each time, with no enemy, only the fish that can take you from one world to another from the ones that you have already discovered.

VI) Coins

You can win coins during the game, they are not shared with the other player. You decide on your side how to spend them, on what item and weapon. The only way to use them is when spending them with the merchants.

VII) NPC and Characters

Throughout the game, you have multiple characters that you can talk to. The most important one would be the traveling fish, as it is them that will allow you to travel quickly from one world to another, and from one world to the Merchant's creek. They will be always during the transition rooms between the worlds.

In the Merchant's creek, there are two more merchants. The first one is the Oyster Lady, she will be in charge of sacrificing the cards of one character for the other. For example, if Belladonna chooses to give up one of her cards to give to the Heart, the Oyster Lady will take care of that. The second merchant is The Weapon Merchants, that will stock your weapons. In the rooms of the worlds, a merchant can appear : it is the Wandering Merchant. He is at your disposal if you want to buy new weapons.

VIII) Uninstallation

To uninstall the game, you delete the zip and the files that you had downloaded from the website. If you had the USB key, you just remove the key from your laptop after ejecting the key.
